1. Scope & How to Read

This document covers **Phase 1**: rebuilding the agency's existing application as a cloud system that behaves the same way staff already know — same menus, same screens, same flows — on a MySQL database.

Operational enhancements (lead/quotation, Nusuk hotel → visa chain, formal approval gates, dashboards) are deliberately **out of scope here** and planned for a later phase.

For every menu you will find: a short purpose, a **flow diagram**, the **numbered steps**, and a **field reference** (the fields on that screen). Required fields are marked *****.

■ Menu / user action ■ System response / output □ Decision □ Screen / form

Every transaction and master screen uses the same layout as today: a **List** on the left and a **Detail** form on the right with **New**, **Save** and **Delete** actions, plus search/filter on list columns. All menus open as **tabs** across the top bar so several records stay open at once.

2. Application Menu Map

FULL MENU TREE

Top-bar tabs: Invoice · Receipt · Payment · All Report · Package · Visa Type · Nationality — matching the current app.

Figure 2 — Complete application menu tree (current model).

Top menu	Contains
Transaction → Basic	Package, Visa Type, Nationality (master data)
Transaction → Activity	Invoice, Receipt, Payment (daily transactions)
Transaction → Reports	All Report — 6 report types by radio button + date range
Settings	Company info, users & roles, print & field settings

3. Overall Transaction Flow

END-TO-END — HOW THE CURRENT MODEL IS USED DAY TO DAY

Set up master data once, then run the daily cycle: raise an **Invoice**, collect money with a **Receipt** (which also serves as the approval/confirmation document), record office **Payments** for expenses and refunds, and read it all back through **Reports**.

Figure 3 — Current-model end-to-end flow: master data → invoice → receipt (repeat until paid) → payments & reports.

4. Login & Main Navigation

ENTRY POINT

Figure 4 — Login and entry to the menus.

1. Open the application in a browser and log in (username, password).
2. The system validates and opens the main menu; the user has the top menu (Transaction, Settings) and can open any item as a tab.

5. Package

TRANSACTION → BASIC → PACKAGE

Maintains travel packages and their rates (e.g. “5 Days Umrah With Visa — 1050”).

Figure 5 — Package flow.

1. Open **Package**; the list loads with search/filter.
2. Click **New**, or select a row to edit.
3. Enter the package name and rate, then **Save**. Use **Delete** to remove/deactivate.

Fields

Field	Type	Notes
Package Name *	Text (EN/AR)	e.g. “5 Days Umrah With Visa”
Rate *	Number (QAR)	Default rate used to price invoices

6. Visa Type

TRANSACTION → BASIC → VISA TYPE

Maintains visa types used on invoices and receipts (e.g. Umrah Visa, Tourist Visa).

Figure 6 — Visa Type flow.

- 1. Open **Visa Type**; existing types load.
- 2. Click **New** or select a row, enter the name, and **Save**.

Fields

Field	Type	Notes
Visa Type *	Text	e.g. Umrah Visa, Tourist Visa

7. Nationality

TRANSACTION → BASIC → NATIONALITY

Maintains the countries / nationalities list.

Figure 7 — Nationality flow.

- 1. Open **Nationality**; the country list loads with search/filter.
- 2. Click **New** or select a row, fill the fields, and **Save**.

Fields

Field	Type	Notes
Country Name *	Text	e.g. Pakistani, Syrian
Short Name *	Text / code	e.g. ALG, 113
Name in Arabic	Text (AR)	For bilingual vouchers

8. Invoice

TRANSACTION → ACTIVITY → INVOICE

Creates the sale: customer, package, passengers and amounts.

Figure 8 — Invoice flow.

1. Open **Invoice**; click **New**. An invoice number and date are generated.
2. Fill the header, add passenger rows; the system computes amount, discount and net amount.
3. **Save**, then **Print** the bilingual invoice and proceed to a Receipt for collection.

Fields

Field	Type	Notes
Invoice No	Auto	System-generated
Invoice Date *	Date	Defaults to today
Customer Name *	Text (EN/AR)	
Nationality *	Dropdown	From Nationality master
Mobile No 1 / 2	Phone	
Package *	Dropdown	From Package master; sets rate
Departure Date *	Date	
No. of Passengers / Seat / Visa Required	Number	
Room Type	Option	Normal / Separate / Nil
Passengers grid	Table	SL No, Passenger Name, Visa Type, Visa Required
Amount / Discount / Net Amount	Number	Computed; override audited
Remarks	Text	

9. Receipt

TRANSACTION → ACTIVITY → RECEIPT

Collects money against an invoice and prints the bilingual Receipt Voucher (سند قبض). In the current model the receipt also serves as the booking confirmation / approval document.

Figure 9 — Receipt / collection flow.

1. Open **Receipt**, click **New**, and **select the invoice**; details auto-fill.
2. The system shows invoice amount and previous balance.
3. Enter the received amount and mode of payment, **Save**, then **Print** the voucher; the balance updates. Repeat for further installments.

Fields

Field	Type	Notes
Receipt No	Auto	System-generated
Receipt Date *	Date	Defaults to today
Select Invoice *	Lookup	Links to the invoice; auto-fills below
Customer Name / Nationality	Auto	From invoice
Mobile No 1 / 2	Auto/Phone	
Package / Departure Date	Auto	From invoice
No. of Passengers / Seat / Visa	Auto	
Room Details / Passenger Details	Auto/Text	
Mode of Payment *	Option	Cash / Bank
Invoice Amount / Previous Balance	Auto	Read-only
Received Amount *	Number	Reduces remaining balance

10. Payment

TRANSACTION → ACTIVITY → PAYMENT

Records office expenses and customer refunds.

Figure 10 — Payment flow (expense or refund).

1. Open **Payment**, click **New**, choose **Type**: Expense or Refund.
2. Enter paid-to, mobile, narration and amount (e.g. office, salary, taxi, printing for expenses).
3. **Save** and **Print** the voucher; expenses feed the Expense report.

Fields

Field	Type	Notes
Payment No	Auto	System-generated
Payment Date *	Date	Defaults to today
Type of Payment *	Option	Expense / Refund
Paid To *	Text	e.g. OFFICE, supplier, customer
Mobile No.	Phone	
Narration	Text	What the payment is for
Paid Amount *	Number	
Remarks	Text	

11. All Report

TRANSACTION → REPORTS → ALL REPORT

One report screen produces all six report types by selection and date range.

Figure 11 — Report flow; one screen, six report types.

1. Open **All Report** and choose the **report type** (radio button).
2. Set **Start Date** and **End Date**, then **Print** to preview and export.

Report types

Report	Shows
Income Summary	Invoice / received / refund / income / balance per invoice, with totals
Pending	Invoices with outstanding balance
Income Detail	Detailed income breakdown
Passengers List	Passengers grouped by departure date with invoice & customer
Departure Date wise	Invoices grouped/filtered by departure with approval status
Expense	Payment vouchers with narration and grand total

12. Settings

TOP BAR → SETTINGS

Administrator area for company details, users and basic system options.

Figure 12 — Settings menu flow.

1. Open **Settings** (admin only).
2. Maintain **company info & branding** (used on all vouchers), **users & roles**, and basic **print/field options**; **Save**.

Advanced dynamic-field and template editing, dashboards and the Nusuk operational chain are planned for a later phase; Phase 1 keeps Settings to the essentials the current app needs.

13. Common Screen Behaviour & Field Key

13.1 Standard actions on every screen

Action	Behaviour
List + Detail	List of records on the left; selected record opens in the detail form on the right
Search / Filter	Inline filter on list columns; sort and paginate
New	Clears the form for a new record; auto number & date where applicable
Save	Validates required fields, saves, refreshes the list
Delete	Removes/deactivates; blocked if referenced by other records
Print	Generates the bilingual PDF (invoice, receipt, payment, reports)
Tabs	Each menu opens as a tab; multiple records open at once

13.2 Field-type key

Type	Meaning
Auto	Generated by the system (numbers, dates, carried-over values)
Text (EN/AR)	Free text; bilingual where shown
Number	Numeric / currency (QAR)
Date	Calendar date
Dropdown / Lookup	Select from master data or another record
Option	Radio / choice (e.g. Cash/Bank, Expense/Refund, Room Type)
Table	Grid of rows (passenger details)
*	Required field

This document defines Phase 1 — the current model rebuilt on the cloud with MySQL. A later phase can add the enquiry/quotation stage, the Nusuk hotel → transport → visa operational chain, formal approval gates, installment scheduling and dashboards, without disrupting these familiar flows.

14. Worked Example — One Customer's Journey

PUTTING IT TOGETHER — A SINGLE CUSTOMER, END TO END

This follows one real-style customer through the current-model system, screen by screen, so the team can see exactly how a booking is managed and how the balance is kept correct from first visit to final report.

Our customer: Mohammad Jahirul Islam (Bangladeshi), booking a family of **5 passengers** on the “5 Days Umrah With Visa” package, departing **10/06/2026**. Total **QAR 6,450**. He pays in two installments. (Based on Invoice 8457 in the sample data.)

14.1 The journey at a glance

Figure 13 — One customer's journey across the screens, with the balance ledger.

14.2 Step by step — what staff do at each screen

Stage	Screen & entry	What is printed	Balance after
1. Visit / enquiry	Front desk takes details: name, nationality (Bangladeshi), mobile, the 5 passenger names, package & departure date	—	—
2. Invoice	Invoice → New . Header filled, 5 passenger rows added (name + visa type). System computes Net = 6,450. Save .	Invoice (bilingual)	Due 6,450
3. Receipt #1	Receipt → New → select Invoice 8457 . Details auto-fill; shows invoice 6,450, previous balance 6,450. Mode = Cash, Received = 5,000. Save .	Receipt Voucher #1 (سند قبض)	1,450
4. Receipt #2	Customer returns Day 5. Receipt → New → select Invoice 8457 . Previous balance now 1,450. Received = 1,450. Save .	Receipt Voucher #2	0 (settled)
5. Departure		Passengers List / manifest	0

On 10/06/2026 the customer's 5 passengers appear on the Passengers List for that date.		
---	--	--

If a passenger cancels, staff raise a **Payment** → **Refund** linked to the invoice; the refund amount reduces the recorded income and is shown on the Income Summary.

14.3 Where this customer appears in the reports

Report	This customer shows as...
Income Summary	Invoice 6,450 · Received 6,450 · Refund 0 · Income 6,450 · Balance 0
Pending	Listed with balance 1,450 after Receipt #1; disappears once Receipt #2 settles it
Income Detail	Both receipts (5,000 + 1,450) itemised against Invoice 8457
Passengers List	All 5 passengers under departure 10/06/2026
Departure Date wise	Invoice 8457 grouped under 10/06/2026 with its approval status
Expense	Not shown (no expense/refund raised for this customer)

The key control: selecting the invoice on every receipt is what keeps one customer's payments tied to one booking, so the **balance** is always correct a
