# 1. Scope & How to Read

---

This is **Phase 1**: rebuilding the agency's existing application as a cloud system on MySQL — same menus, same screens, same flows the staff already know — with two additions the business asked for: a proper **receipt** → **manager approval** flow and **user management with role and menu-wise permissions**. Larger enhancements (enquiry/quotation, the Nusuk hotel → visa chain, dashboards) are planned for a later phase.

For every menu you get a short purpose, a **flow diagram**, the **steps**, and the **screen fields**. Required fields are marked **\***.

■ Menu / user action   ■ System / output   □ Decision   □ Screen / form

Every transaction and master screen uses a **List + Detail** layout with **New**, **Save**, **Delete** and search/filter. Menus open as **tabs** so several records stay open at once — matching the current application.

## 2. Application Menu Map

FULL MENU TREE

New in Phase 1 (orange): Receipt Approval (manager) and User Management. Other items match the current app.

Figure 1 — Complete menu tree; orange = added in Phase 1.

| Top menu               | Contains                                                     |
|------------------------|--------------------------------------------------------------|
| Transaction → Basic    | Package, Visa Type, Nationality                              |
| Transaction → Activity | Invoice, Receipt, <b>Receipt Approval</b> , Payment          |
| Transaction → Reports  | All Report — 6 report types                                  |
| Settings               | Company info, <b>User Management</b> , print & field options |

### 3. Overall Transaction Flow

#### END-TO-END — DAILY USE

Set up master data once, then run the daily cycle: raise an **Invoice**, collect with a **Receipt**, the manager **approves** the day's receipts, record office **Payments**, and read it back through **Reports**.

Figure 2 — End-to-end: master data → invoice → receipt → manager approval → payments & reports.

## 4. Login & Navigation

ENTRY POINT

Figure 3 — Login; the user sees only the menus their role allows (Section 11).

## 5. Master Data

TRANSACTION → BASIC → PACKAGE / VISA TYPE / NATIONALITY

All three master screens share one flow: open → list loads → New or select → fill fields → Save (or Delete). They provide the reference data used on invoices and receipts.

Figure 4 — Shared master-data flow.

### Fields per master screen

| Screen      | Fields                                       |
|-------------|----------------------------------------------|
| Package     | Package Name * (EN/AR), Rate * (QAR)         |
| Visa Type   | Visa Type * (e.g. Umrah Visa, Tourist Visa)  |
| Nationality | Country Name *, Short Name *, Name in Arabic |

## 6. Invoice

TRANSACTION → ACTIVITY → INVOICE

Creates the sale. One invoice can hold **several package line items** for the same customer.

Figure 5 — Invoice flow.

1. Open **Invoice** → **New**; fill the header, add one or more package lines and passenger rows.
2. System computes amount, discount and net; **Save** and **Print**, then proceed to a Receipt.

### Fields

| Field                           | Type            | Notes                                            |
|---------------------------------|-----------------|--------------------------------------------------|
| Invoice No                      | Auto            | System-generated                                 |
| Invoice Date *                  | Date            | Defaults to today                                |
| Customer Name * / Nationality * | Text / Dropdown | Nationality from master                          |
| Mobile No 1 / 2                 | Phone           |                                                  |
| Package line(s) *               | Table           | Package, pax, rate, line total — several allowed |
| Departure Date *                | Date            |                                                  |
| No. of Passengers / Seat / Visa | Number          |                                                  |
| Room Type                       | Option          | Normal / Separate / Nil                          |
| Passengers grid                 | Table           | SL No, Name, Visa Type, Visa Required            |
| Amount / Discount / Net         | Number          | Computed; override audited                       |
| Remarks                         | Text            |                                                  |

## 7. Receipt

TRANSACTION → ACTIVITY → RECEIPT

Collects money against the customer's booking and prints the bilingual Receipt Voucher (سند قبض). A receipt can cover several packages on one booking; the **balance** is tracked across all of them. New receipts are **Draft** until submitted for approval (Section 8).

Figure 6 — Receipt / collection flow.

### Fields

| Field                               | Type        | Notes                              |
|-------------------------------------|-------------|------------------------------------|
| Receipt No / Date *                 | Auto / Date |                                    |
| Select Invoice *                    | Lookup      | Links to booking; auto-fills below |
| Customer / Nationality / Package(s) | Auto        | From invoice                       |
| Mode of Payment *                   | Option      | Cash / Bank                        |
| Invoice Amount / Previous Balance   | Auto        | Read-only                          |
| Received Amount *                   | Number      | Reduces remaining balance          |

## 8. Receipt Approval (Receipt → Manager)

TRANSACTION → ACTIVITY → RECEIPT APPROVAL

The standardized approval the business uses: counter staff **select** the day's receipts and **submit them to the manager with the total amount**; the manager reviews and **approves**. Only approved receipts count as confirmed income.

■ Counter staff ■ Manager ■ System

Figure 7 — Receipt-approval flow (counter staff → manager).

1. Staff create receipts (each **Draft**), then **select** the ones to submit (the day's collection).
2. Staff **submit**; the system shows the receipt count and **total amount** and marks them **Submitted**.
3. The manager opens the **approval queue**, checks each receipt, and **approves** (→ **Approved/Posted**, locked) or **rejects** (returns to staff with a comment).
4. Only approved receipts count in the income reports.

| Rule                 | Behaviour                                                                        |
|----------------------|----------------------------------------------------------------------------------|
| Editable             | Only while Draft; locked after approval (changes need void + re-entry, audited)  |
| Income               | Only approved receipts count in Income reports                                   |
| Batch total          | Submission shows the total for the manager to confirm against cash/bank received |
| Separation of duties | Submit = staff; Approve/Reject = manager only                                    |
| Audit                | Submit, approve, reject all record user, time, comment                           |

## 9. Payment — Expense & Refund

TRANSACTION → ACTIVITY → PAYMENT

Figure 8 — Payment flow (expense or refund).

### Fields

| Field                   | Type          | Notes                      |
|-------------------------|---------------|----------------------------|
| Payment No / Date *     | Auto / Date   |                            |
| Type of Payment *       | Option        | Expense / Refund           |
| Paid To * / Mobile      | Text / Phone  | Office, supplier, customer |
| Narration               | Text          | What the payment is for    |
| Paid Amount * / Remarks | Number / Text |                            |

## 10. All Report

TRANSACTION → REPORTS → ALL REPORT

One screen produces all six reports by selection + date range; preview then export to PDF / Excel.

Figure 9 — Report flow.

| Report              | Shows                                                                   |
|---------------------|-------------------------------------------------------------------------|
| Income Summary      | Invoice / received / refund / income / balance per invoice, with totals |
| Pending             | Invoices with outstanding balance                                       |
| Income Detail       | Detailed income breakdown                                               |
| Passengers List     | Passengers grouped by departure date                                    |
| Departure Date wise | Invoices grouped by departure with approval status                      |
| Expense             | Payment vouchers with narration and grand total                         |

## 11. User Management & Permissions

### SETTINGS → USER MANAGEMENT

Access is controlled by **roles**. A role defines permissions **per menu** and **per action** (View, Create, Edit, Delete, Print, Submit, Approve). Each user gets a role and then sees only what it allows.

Figure 10 — Define role & permissions once, assign to users.

### Default role × menu permission matrix

• allowed ▲ limited / view — not allowed (fully editable by the administrator)

| Menu             | Admin   | Manager        | Counter             | Accountant        | Viewer |
|------------------|---------|----------------|---------------------|-------------------|--------|
| Master Data      | Full    | Full           | View                | View              | View   |
| Invoice          | Full    | Full           | Create/Edit/Print   | View              | View   |
| Receipt          | Full    | Full           | Create/Print/Submit | Create/Print      | View   |
| Receipt Approval | Approve | Approve/Reject | —                   | —                 | —      |
| Payment          | Full    | Full           | —                   | Create/Edit/Print | View   |
| Reports          | All     | All            | Limited             | Financial         | View   |
| User Management  | Full    | —              | —                   | —                 | —      |
| Settings         | Full    | View           | —                   | —                 | —      |

### Enforcement

- Menus and buttons appear only if the role permits; every request is also checked on the server so it can't be bypassed.
- **Separation of duties:** whoever submits a receipt cannot approve it — Approve is manager-only.
- User fields: name, login, email/mobile, password, role, active/inactive, optional 2FA. Logins and permission changes are audited.

## 12. Settings

TOP BAR → SETTINGS

Administrator area: **company info & branding** (used on all vouchers), **User Management** (Section 11), and basic **print/field options**. Open → edit → Save.

Figure 11 — Settings menu flow.

## 13. Common Screen Behaviour & Field Key

| Action              | Behaviour                                                                                    |
|---------------------|----------------------------------------------------------------------------------------------|
| List + Detail       | List on the left; selected record opens in the detail form                                   |
| Search / Filter     | Inline filter, sort, paginate on list columns                                                |
| New / Save / Delete | New clears the form (auto no/date); Save validates & refreshes; Delete blocked if referenced |
| Print               | Generates the bilingual PDF (invoice, receipt, payment, reports)                             |
| Tabs                | Each menu opens as a tab; multiple records open at once                                      |

### Field-type key

| Type              | Meaning                                                       |
|-------------------|---------------------------------------------------------------|
| Auto              | Generated by the system (numbers, dates, carried-over values) |
| Text (EN/AR)      | Free text; bilingual where shown                              |
| Number / Date     | Numeric or currency (QAR) / calendar date                     |
| Dropdown / Lookup | Select from master data or another record                     |
| Option            | Radio / choice (Cash/Bank, Expense/Refund, Room Type)         |
| Table             | Grid of rows (package lines, passenger details)               |
| *                 | Required field                                                |

## 14. Worked Example — One Customer

### PUTTING IT TOGETHER — END TO END

**Customer: Mohammad Jahirul Islam** (Bangladeshi), family of **5 passengers**, “5 Days Umrah With Visa”, departing **10/06/2026**. Total **QAR 6,450**, paid in two installments. (Based on Invoice 8457.)

Figure 12 — One customer's journey across the screens, with the balance ledger.

| Stage         | Screen & entry                                                  | Printed             | Balance     |
|---------------|-----------------------------------------------------------------|---------------------|-------------|
| 1. Visit      | Take name, nationality, 5 passenger names, package, departure   | —                   | —           |
| 2. Invoice    | Invoice → New; package line + 5 passengers; Net 6,450; Save     | Invoice (bilingual) | Due 6,450   |
| 3. Receipt #1 | Receipt → New → select Invoice 8457; Cash 5,000; Save           | Receipt Voucher #1  | 1,450       |
| 4. Approval   | Staff submit the day's receipts; manager approves               | —                   | 1,450       |
| 5. Receipt #2 | Customer returns; Receipt → select 8457; 1,450; Save & approved | Receipt Voucher #2  | 0 (settled) |

On departure (10/06/2026) the 5 passengers appear on the Passengers List. If a passenger cancels, a **Payment** → **Refund** linked to the invoice adjusts the income.

### Where this customer appears in reports

| Report                           | Shows as...                                             |
|----------------------------------|---------------------------------------------------------|
| Income Summary                   | Invoice 6,450   Received 6,450   Balance 0              |
| Pending                          | Balance 1,450 after Receipt #1; disappears once settled |
| Passengers List / Departure-wise | 5 passengers under 10/06/2026                           |

**The key control:** selecting the invoice on every receipt ties one customer's payments to one booking, so the balance stays correct and the manager approves a clear, totalled set of receipts.
