

Receipt Approval & User Management

Two standardized flows: how a customer's multi-package receipts are sent to a manager for approval, and how users, roles and menu-wise permissions are managed. Extends the Complete Menus & Flows document.

System for

AL RAWDA GROUP HAJJ & UMRAH SERVICES

Bank Street, Street No. 910, Doha — Qatar

Contents

#	Section
1	Receipt approval — overview & standard terms
2	One customer, several packages — how it is captured
3	Receipt → Manager approval flow (standardized)
4	Receipt status model & rules
5	User Management — concepts & flow
6	Role & menu-wise permission matrix
7	Sample roles & enforcement

This addendum standardizes two areas requested for Phase 1. It sits alongside *FLOW-RAWDA-ERP-003 — Complete Menus & Flows*; the receipt-approval step replaces the informal “receipt = approval” behaviour with a clear, auditable approval workflow, and adds the User Management menu.

1. Receipt Approval — Overview

In day-to-day work, a customer often takes **several packages** at once (for example an Umrah package plus extra transport or an additional hotel night). The counter staff record the customer's payment as a **receipt**. At the end of the day, staff **select the receipts** they have created and **send them to the manager with the total amount**; the manager reviews and **approves** them. Only approved receipts are treated as confirmed income.

This document standardizes that process so every receipt follows the same path, the manager has one place to approve from, and the audit trail is complete.

1.1 Standard terms

Term	Standard meaning
Booking / Invoice	The customer's order. May contain multiple package line items for one customer.
Receipt	A record of money received from the customer against their booking(s).
Submission (for approval)	A set of selected receipts sent to the manager together, with the total amount.
Approval	Manager's confirmation that the selected receipts are correct and accepted.
Posted	An approved, locked receipt that counts in income reports.

2. One Customer, Several Packages

HOW A MULTI-PACKAGE BOOKING IS CAPTURED

Standard rule: a single **booking/invoice** for the customer can hold **several package line items**. The receipt is raised against that booking and can cover one or all of the packages. This keeps one customer's money in one place and makes the balance and approval straightforward.

Figure 1 — Several packages on one booking; one receipt collects against them; balance tracked across all.

- Each package is a **line item** on the booking (package, qty/pax, rate, line total). The booking net is the sum of lines.
- A receipt records the amount received and reduces the booking **balance** regardless of how many packages it contains.
- The printed receipt voucher lists the packages covered, the amount paid, and the remaining balance — matching today's bilingual voucher.

If the agency prefers, several separate invoices for the same customer can instead be **grouped under the customer** and a single receipt applied across them. The standardized rule is simply: **one receipt, clearly linked to the customer's booking(s), with a correct balance.**

3. Receipt → Manager Approval Flow

STANDARDIZED — COUNTER STAFF & MANAGER

■ Counter staff ■ Manager ■ System

Figure 2 — Standardized receipt-approval flow across the counter-staff and manager lanes.

- Create receipts.** Counter staff record each customer's payment as a receipt (covering one or several packages). Each new receipt is **Draft**.
- Select receipts.** On the Receipt Approval screen, staff tick the receipts to submit (typically the day's collection).
- Submit to manager.** Staff submit the selected set; the system shows the **number of receipts and the total amount** and marks them **Submitted** (pending approval).
- Manager reviews.** The manager opens the approval queue, sees the selected receipts and total, and checks each (customer, packages, amount, mode).
- Approve / reject.** Approved receipts become **Approved / Posted** and lock; rejected ones return to staff with a comment to correct and resubmit.
- Reports update.** Only approved receipts count as confirmed income in the reports.

What changes vs today. Instead of the receipt itself being the informal approval, the manager now formally approves a **selected batch of receipts with its total** — exactly the daily routine described — and the system records who approved what and when.

4. Receipt Status Model & Rules

Figure 3 — Receipt status lifecycle.

Rule	Standard behaviour
Editable when	Only in Draft . Once Submitted it is read-only to staff; once Approved it is locked to everyone (changes need a void + re-entry, audited).
Income recognition	Only Approved receipts count in Income Summary / Income Detail. Submitted receipts show as "pending approval".
Batch total	On submission the system computes and displays the total of selected receipts for the manager to confirm against the cash/bank handed over.
Partial approval	The manager may approve some and reject others in a batch; rejected ones return individually.
Audit	Every submit, approve and reject records the user, timestamp and comment.
Permissions	Submit = counter staff; Approve/Reject = manager only (see Section 6).

5. User Management — Concepts & Flow

SETTINGS → USER MANAGEMENT

Access is controlled by **roles**. A role is a named set of permissions defined **per menu** and **per action** (View, Create, Edit, Delete, Print, Approve). Each user is given a role; the user then sees and can use only what the role allows.

Figure 4 — Define role & permissions once, then assign to users.

1. **Roles:** create/edit roles and set their menu-wise, action-wise permissions.
2. **Users:** create a user (name, login, email/mobile, password), assign a role, set active/inactive, optional 2FA.
3. **Login:** the user sees only permitted menus; blocked actions are hidden or disabled.
4. **Maintenance:** reset password, deactivate on exit, reassign role; every change is audited.

6. Role & Menu-wise Permission Matrix

PER MENU × PER ACTION

Each role is configured by ticking the actions it may perform on each menu. The matrix below shows a recommended default; it is fully editable by the administrator.

• allowed ▲ own records only — not allowed

Actions available per menu

Menu	Actions
Master Data (Package, Visa Type, Nationality)	View, Create, Edit, Delete
Invoice	View, Create, Edit, Delete, Print
Receipt	View, Create, Edit, Delete, Print, Submit
Receipt Approval	View, Approve, Reject
Payment (Expense/Refund)	View, Create, Edit, Delete, Print
Reports	View, Export/Print
User Management	View, Create, Edit, Delete
Settings	View, Edit

Default role × menu access

Menu	Admin	Manager	Counter	Accountant	Viewer
Master Data	Full	Full	View	View	View
Invoice	Full	Full	Create/Edit/Print	View	View
Receipt	Full	Full	Create/Print/Submit	Create/Print	View
Receipt Approval	Approve	Approve/Reject	—	—	—
Payment	Full	Full	—	Create/Edit/Print	View
Reports	All	All	Limited	Financial	View
User Management	Full	—	—	—	—
Settings	Full	View	—	—	—

“Full” = all actions on that menu. The administrator can change any cell; new roles can be added at any time.

7. Sample Roles & Enforcement

7.1 Sample roles

Role	Purpose
Administrator	Full system access including User Management, master data, settings.
Manager	Approves/rejects receipts, sees all reports, manages bookings; no user administration.
Counter staff	Creates invoices and receipts, prints vouchers, submits receipts for approval. Cannot approve, delete or see financial settings.
Accountant	Handles payments, expenses, refunds and financial reports.
Viewer / Auditor	Read-only access to records and reports.

7.2 How permissions are enforced

- **Menu visibility:** a user only sees menu items their role permits — the rest are hidden.
- **Action control:** buttons (New, Edit, Delete, Print, Submit, Approve) are shown only if allowed.
- **Server-side check:** every request is also checked on the server, so permissions cannot be bypassed.
- **Separation of duties:** the person who **submits** a receipt cannot be the one who **approves** it — Approve is manager-only.
- **Audit log:** logins, permission changes and approvals are all recorded.

7.3 Where these sit in the menus

New / changed menu	Location
Receipt Approval	Transaction → Activity → Receipt Approval (manager); staff submit from the Receipt screen
User Management	Settings → Users & Roles

These two flows are standardized for Phase 1 and integrate with the existing menus and reports. The later phase (enquiry/quotation, Nusuk operational chain, dashboards) can build on the same role/permission framework without rework.
